# Energy performance certificate (EPC)

76, Mullaghinch Road Aghadowey COLERAINE BT51 4AU	Energy rating	Valid until:	30 June 2025
		Certificate number:	0099-4021-0233-6595-6914
Property type			

# Detached house

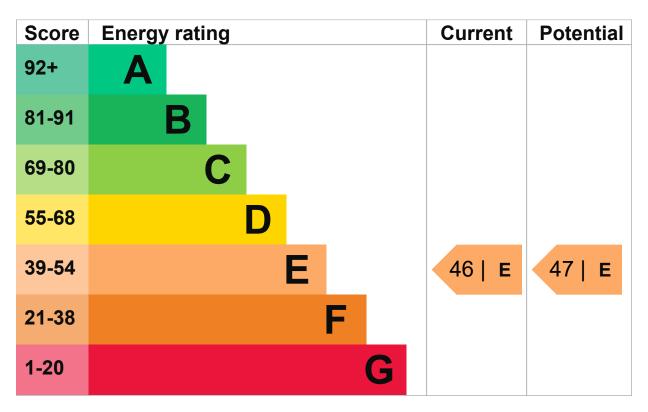

# Total floor area

542 square metres

## Energy efficiency rating for this property

This property's current energy rating is E. It has the potential to be E.

See how to improve this property's energy performance.

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

For properties in Northern Ireland:

- the average energy rating is D
- the average energy score is 60

#### Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says "assumed", it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

Feature	Description	Rating
Wall	Granite or whinstone, as built, no insulation (assumed)	Very poor
Wall	Cavity wall, as built, insulated (assumed)	Good
Roof	Pitched, 200 mm loft insulation	Good
Window	Some double glazing	Poor
Main heating	Boiler and radiators, oil	Average
Main heating	Boiler and radiators, wood logs	Average
Main heating control	Time and temperature zone control	Very good
Main heating control	Programmer, room thermostat and TRVs	Good
Hot water	From main system	Average
Lighting	Low energy lighting in 50% of fixed outlets	Good
Floor	Solid, no insulation (assumed)	N/A
Floor	Solid, insulated (assumed)	N/A
Secondary heating	Room heaters, dual fuel (mineral and wood)	N/A

# Low and zero carbon energy sources

Low and zero carbon energy sources release very little or no CO2. Installing these sources may help reduce energy bills as well as cutting carbon emissions. The following low or zero carbon energy sources are installed in this property:

# Biomass main heating

# Primary energy use

The primary energy use for this property per year is 229 kilowatt hours per square metre (kWh/m2).

What is primary energy use?

# **Additional information**

Additional information about this property:

Stone walls present, not insulated

#### Environmental impact of this property

This property's current environmental impact rating is E. It has the potential to be E.

Properties are rated in a scale from A to G based on how much carbon dioxide (CO2) they produce.

Properties with an A rating produce less CO2 than G rated properties.

# An average household produces

6 tonnes of CO2

## This property produces

## 22.0 tonnes of CO2

# This property's potential production

22.0 tonnes of CO2

By making the <u>recommended changes</u>, you could reduce this property's CO2 emissions by 0.0 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

#### Improve this property's energy performance

By following our step by step recommendations you could reduce this property's energy use and potentially save money.

Carrying out these changes in order will improve the property's energy rating and score from E (46) to E (47).

Do I need to follow these steps in order?

# Step 1: Low energy lighting

Low energy lighting

# Typical installation cost

# Typical yearly saving

Potential rating after completing step 1

# Step 2: Double glazed windows

Replace single glazed windows with low-E double glazed windows

## Typical installation cost

## Typical yearly saving

Potential rating after completing steps 1 and 2

# Step 3: Internal or external wall insulation

Internal or external wall insulation

# Typical installation cost

£4,000 - £14,000

Potential energy

rating

£75

£63

47 | E

£3,300 - £6,500

£255

49 | E

Typical yearly saving

	£1,844
Potential rating after completing steps 1 to 3	
	66   D
Step 4: Solar photovoltaic panels, 2.5 kWp	
Solar photovoltaic panels	
Typical installation cost	
	£5,000 - £8,000
Typical yearly saving	£244
Potential rating after completing steps 1 to 4	69   C
Step 5: Wind turbine	
Wind turbine	
Typical installation cost	£15,000 - £25,000
Typical yearly saving	£538
Potential rating after completing steps 1 to 5	
	73   C

# Paying for energy improvements

You might be able to get a grant from the <u>Boiler Upgrade Scheme (https://www.gov.uk/guidance/check-if-you-may-be-eligible-for-the-boiler-upgrade-scheme-from-april-2022)</u>. This will help you buy a more efficient, low carbon heating system for this property.

Find energy grants and ways to save energy in your home (https://www.gov.uk/improve-energy-efficiency).

#### Estimated energy use and potential savings

## Estimated yearly energy cost for this property

# **Potential saving**

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

The potential saving shows how much money you could save if you complete each recommended step in order.

# Heating use in this property

Heating a property usually makes up the majority of energy costs.

# Potential energy savings by installing insulation

The assessor did not find any opportunities to save energy by installing insulation in this property.

#### Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
